³ Facebook may be fined £500,000 by the privacy regulator after the social-network giant failed to prevent key user data falling into the hands of a political consultancy that helped get President Donald Trump elected. The UK's Information Commissioner's Office is threatening the company with the maximum penalty allowed. The tech giant is accused of not properly protecting user data and not sharing how people's data was harvested by others. £500,000 to Facebook is something less than a pin prick. Now £500m might have been a pin prick. See for example:
